- ✓ Prevents scours
- ✓ Enhances resistance to disease
- ✓ Aids digestion processes
- ✓ Calves grow to weight quickly and wean earlier
- ✓ BioGro certified input for organics

Manawatu Farm Manager of the Year Award winner, Renae Flett

## What is OptiGuard?

OptiGuard is a premium quality 100% natural, finely milled BPM zeolite that is mined and manufactured locally in the Taupo Volcanic Zone. Natural BPM zeolites have a unique three dimensional porous structure, allowing them to absorb and release water reversibly. The extensive internal network of pores gives zeolites an amazing capacity to absorb mineral ions and bacterial toxins.

OptiGuard has been specially formulated with a small, finely milled particle size. The ultra-fine particle size of OptiGuard ensures a larger total functional surface, providing a much larger surface-gut environment interface. This allows for more rapid absorption and thus deactivation of bacterial toxins, as well as improved electrolyte and water balance in the intestines.

## How to use OptiGuard?

- Easy to feed, OptiGuard can be mixed into colostrum and milk. Simply stir to reconstitute.
- OptiGuard can also be added to your calf-meal mix, or placed directly into feed troughs to allow calves to self-manage their intake.
- Addition rates from 10gm per calf, per day – or ad-lib as necessary. Calves will self-manage their intake. You cannot over-feed OptiGuard.
- Please ensure calves have access to plenty of fresh water.

## Ingredients:

100% natural, finely milled BPM zeolite

*May contain crystalline silica in a respirable form*

### CUSTOMER FEEDBACK:

*"After getting a few issues with one mob of calves the vets put me onto OptiGuard... my calves absolutely love the stuff. Every mob is now on it with their meal and they are growing so well!"*
